

INNOVATORS

Five Indian Americans are among *Technology Review's* under-35 world changers for 2005. Each year, the magazine identifies young entrepreneurs, scientists, artists, technicians and academics who have put fresh ideas into practice, developing innovations that have changed the way we live, or probably will.

ANITA GOEL, 32,

whose company, Nanobiosym, is developing devices that could more quickly and accurately identify disease-causing matter in blood samples.

NARASIMHA CHARI, 31,

whose Tropos Networks provides low-cost, easily installed mesh networks that offer accessible communications to developing countries, such as his native India.

ADAM RASHEED, 31,

at GE Global Research, who fundamentally improved an aircraft propulsion system.

RAJIT MANOHAR, 33,

of Cornell University, who has found a way to make computer chips work faster on less power.

SHILADITYA SENGUPTA, 33,

of Harvard Medical School, whose tiny polymer spheres within spheres may be able to deliver chemotherapy to cancer cells with fewer side effects.
